Professional

Our smart approach provides a tailored service and good value facade solutions.

Six Star Construction has been established as an architectural cladding business, with 15 years experience in the construction industry.

This experience revealed cost and time saving opportunities for builders in the cladding process of construction work.

Our team of experienced, skilled workers are dedicated to delivering quality facade solutions.

We promote sustainable building and incorporate eco-friendly practices in our business

Accurate

Precise measurements deliver highly specified facades that look great and don't cost the earth.

Our stringent design process reduces the need to constantly return to site to re-check measurements.

We work closely with the builder and engineer to ensure that our frames and panels are manufactured to the highest standard, with minimal tolerance for error.

- Six Star Constructions' engineering significantly reduces the use of steel and concrete.
- Coordinated deliveries reduce our embodied carbon emissions.
- Vehicle, transport and electricity consumptions are carbon offset.
- Manufacturing materials are recycled and packaging is returned to suppliers for re-use.
- We prefer green star rated products and refer to **ecospecifier** as an information source.

Efficient

Facade installation can be an expensive and time consuming process. Six Star Construction streamlines the process and provides many benefits.

- We remove the need to separate the facade structure and secondary framing.
- By entering the construction process early, we allow the builder to change the building sequence and compress timelines.
- We save time and money by using lightweight engineered systems.
- We manufacture and assemble the facade structure offsite.
- We typically achieve 50-80m² of completed facade per day with a team of four tradespersons.
